

Safety, comfort, and aesthetics are the keywords on which the new Sintesi is based, a helmet that can be used in different environments and which is aimed at a vast target of cyclists. Sintesi is the sum of KASK heritage and combines a number of high-end features together with a range of eleven eye-catching colors. Featuring a polyester chinstrap, Sintesi can be worn by commuters who use the bicycle in the urban environment, by the person who wants to take a road trip, and by cyclists who want to test themselves on a long dirt road. One choice, many paths.

M / L

## TECHNOLOGIES

**E** **ERGOFIT**  
A brand-new adjustment system engineered to improve fit and comfort. The redesigned wheel offers a better grip for managing micro adjustments, while improved aesthetics and design result in a new fit-system to provide optimal comfort and fit.

**As** **ANTISTATIC**  
Because of its conductivity, the inner padding fiber absorbs and disperses electric charges accumulated from the environment or during physical exercise.

**MIT** **IN-MOULDING TECHNOLOGY**  
The MIT Technology, applied to KASK cycling helmets, guarantees a higher safety and a complete protection thanks to the polycarbonate layer that covers the shell on the top, on the base ring and on the back.

**HB** **HIGH BREATHABILITY**  
Because the inner padding fiber speeds up the evaporation process of perspiration, slow down the formation of humidity on the skin and keeps the temperature constant.

**HiViz** **HIGH VISIBILITY STICKERS**  
High visibility stickers for maximum safety even in poor visibility conditions.

**Ab** **ANTI BACTERIAL**  
Because the inner padding fiber respects the skin and protects it from bacteria and pollutant dusts. Eliminating the risk of annoying allergies.
