ABOUT KASK

KASK is an Italian company born in 2004, which specializes in developing, designing and manufacturing helmets of the highest quality. Innovative and attractive, the entire KASK collection is a perfect balance between technological excellence, functionality, safety, comfort and its exclusive 'Made in Italy' design.

KASK cycling helmets are used by all kinds of riders across all disciplines – road, off road, triathlon, track, cyclo-cross, gravel commuting and urban – and KASK is proud of its sponsorship of, and development in conjunction with, many leading teams and athletes.

On the road, these teams and athletes include the Team INEOS Grenadiers, the Eolo Kometa Pro Cycling Team and professional women's team Ceratizit-WNT Pro Cycling, and pro triathletes Andy Potts, Matt Hanson, Giulio Molinari and Michelle Vesterby. In MTB, KASK sponsors the Swiss off-road star Lukas Flückiger, and is a proud partner of the Italian, Australian and New Zealand Cycling Federation.

KASK WG11 ROTATIONAL IMPACT TEST

Kask has always been committed to creating products that guarantee both maximum safety and comfort, exceeding all requirements set by international standards and norms.

Kask WG11 test is a protocol adopted by Kask to identify an objective method, based on scientific sources, for measuring the performance of its helmets against rotational impacts.

ROTATIONAL IMPACT

Most of tests on helmets that use rotational impact prevention technologies are carried on using head forms whose coefficient of friction is much higher than those of human skull and therefore do not reflect reality.

The Kask WG11 test is simple, robust, and reliable. Impact conditions are based on real accident data.

The final test protocol is:

OBLIQUE IMPACT TESTs

Oblique tests @ 45°, impact speed 6 m/s, BrIC < 0,68
 + grade 80 closed-coat aluminium oxide abrasive paper
 + head form nominal coefficient of friction 0,3
 + wireless system: triaxial accelerometer + n. 3 ARS

Headform: EN960 serie

Measurements: Peak of rotational acceleration, Peak of linear acceleration, HIC, BRIC (< 0,68)

All Kask helmets successfully pass this test, with values that are never above a BrIC 0,390

LINEAR IMPACT

The "pass-fail" criterion is based on the BrIC value, an algorithm that defines the level of brain injury. This value must be lower than 0,68.

Aero Control

Incredibly aerodynamic and top performing shell, tested in the wind-tunnel and able to provide a really impressive CX rate. Any position the head will assume the outflow of the air will be perfectly in line with the helmet.

3D Dry Padding

The tridimensional 3D DRY padding utilizes a multi-layer open cell construction process: high technology for the best comfort and performance.

High Visibility Stickers

High visibility stickers for maximum safety even in poor visibility conditions.

Coolmax® Fiber

Removable and washable inner padding in Coolmax® material.

Magnetic Visor - Patent Pending

The innovative magnetic visor is patented by KASK and integrated to the helmet thanks to a five magnets' system. The total adherence of the visor to the helmet allows a continuous air flow and a great aerodynamic.

Soft Wind

The inner padding in Soft Wind is highly breathable, antibacterial and guarantees a perfect temperature control.

In-Moulding Technology

The MIT Technology, applied to KASK cycling helmets, guarantees a higher safety and a complete protection thanks to the polycarbonate layer that covers the shell on the top, on the base ring and on the back.

One-move Switch System

Changing the visor while on the street has never been easier and faster. By simply pushing the buttons on the side, it's possible to detach and change it in order to face different levels of brightness. The One-Move Switch System was developed to perfectly fit with the helmet's design.

Anti Bacterial

Because the inner padding fiber respects the skin and protects it from bacteria and pollutant dusts. Eliminating the risk of annoying allergies.

Active Ventilation System

The active ventilation system integrated in the helmet allows for improved cooling. Using the lever on the rear, the amount of airflow can be adjusted to suit the rider's needs. This new ventilation system, combined with breathable inner fabrics, improves the rider's physiological comfort.

Cotton Chinstrap

Fashionable chinstrap crafted out of a durable cotton weave to yield comfort and resist stretching.

Full Carbon Shell

Low weight fully carbon shell provides maximum protection at very low weight.

Octo Fit

Rubberised Micro Dial adjuster provides improved finger grip. Floating cradle contact points combine internal gel pads for optimum comfort. These supports are designed to oscillate freely through 180° allowing a perfect fit on any shaped head. The Skeletal Brackets of the cradle have been designed and refined to provide the best fit and support whilst being as light as possible.

Up & Down Fit System

The up'n'down adjustment system gives the most precise and comfortable fitting of any helmet thanks to its unique double pivot design. This allows the back of the head to be cradled by the straps, which are then easily tightened to the correct tension by a central ratchet wheel. This fit system combined with a very breathable, non-slip, gel internal liner ensures top performance for the user.

HyVent

Structure and design of the shell implement the air flow and break up the exchangeable heat.

Antistatic

Because of its conductivity, the inner padding fiber absorbs and disperses electric charges accumulated from the environment or during physical exercise.

Octo Fit Plus Retention System

The new overinjected rubber dial provides improved finger grip. The vertical stabiliser has been redesigned for greater stability providing a customised fit for riders with longer hair. The ergonomic neck support ensures a fast and secure fit against the back of the head.

Double D-Ring Chin Strap

Two metal D-rings on one side of the fastener and a simple strap on the other, provide the ideal combination for a micro-adjustable secure fit for supreme comfort and safety.

Panoramic Visor OTG

No compromise in the wearability of KASK visors. The panoramic shape ensures a perfect fit – even for someone who wears eyeglasses – to maintain the best look in total safety.

Ergo Fit

A brand-new adjustment system engineered to improve fit and comfort. The redesigned wheel offers a better grip for managing micro adjustments, while improved aesthetics and design result in a new fit-system to provide optimal comfort and fit.

Eco-Leather Chinstrap

Chin pad with eco-leather chinstrap. The allergenic and washable chinstrap is extremely comfortable and helps to avoid irritation of the skin.

High Breathability

Because the inner padding fiber speeds up the evaporation process of perspiration, slow down the formation of humidity on the skin and keeps the temperature constant.

100% Merino Wool Liner by Reda

Thanks to the properties of Merino wool and the exclusive KASK REDA technology, the internal padding provides unmatched comfort. When in contact with the skin, Merino wool helps stabilize body temperature, ensures high breathability, and dries quickly.

Removable Cheek Pads

Emergency removable cheek pads to improve security in case of crash.

Inner Frame

The innovative inner strengthening frame offers a greater mechanical strength and a better compactness. In case of shock it prevents the helmet from breaking into many pieces, allowing greater safety for every rider.

Abs Shell

Helmet exterior constructed from anti-scratch, durable ABS.

Merino Wool

Made in fine merino wool and polyamide yarn, light and opaque, with excellent thermoregulation property.

Panoramic Visor

Wraparound visor features panoramic visibility for safe riding on city streets. Interchangeable and easy to replace, the visor comes in a variety of colours in the KASK range.

Adjustable Visor

The visors can be adjusted in different positions for optimum visibility.

Silver Plus® Treated Fabric

Inner padding fabric that's been treated with the antibacterial and antimicrobial SILVER PLUS® process. The reaction between titanium dioxide and silver chloride in this process inhibits odour-causing bacteria that would otherwise compromise hygiene.

Resistex® Carbon
