

Your Morakniv warranty lasts a lifetime

A knife from Morakniv is a robust tool that is made to last. Morakniv guarantees that all of our knives are free from defects in material, construction or workmanship for the life of the product under normal use according to the care guidelines on our website. If the knife is defective due to materials or workmanship, we will repair it at no cost or replace it with a new knife of the same or an equivalent model.*

Morakniv is proud of and well known for our high quality. Our customers shall feel confident that every Morakniv they buy will last for a long time under tough conditions.

*Read more about the terms of the warranty on www.morakniv.se.

Morakniv Garberg is a powerful full tang knife designed to perform the toughest tasks it encounters. Manufactured at our factory in Mora, Sweden, it's the most robust knife we've ever made. The 3.2mm thick blade is made from high grade Swedish stainless steel, treated to make it even stronger and more durable. The blade has a Scandi-grind profile that makes it easy to keep sharp and a ground spine compatible with a fire starter. Whatever adventure you're on you won't want to be without it, making your Morakniv a part of you.

A part of you **since 1891** Firmly anchored in a long tradition of craftsmanship, our first factory was founded on the outskirts of Mora in 1891. It successfully combined the benefits of hand-forged blades and industrial manufacture. The result was a knife with a grip-friendly handle and a very sharp and robust blade. Today, the knife from Mora is known for its high quality and is also recognized as a national symbol of Sweden. We take pride in our heritage and that every one of our knives are made in Mora, Sweden. Therefore we have decided to name our new series of outdoor knives after places in and around Mora that inspire us. This means that the beautiful region of Dalarna and the proud origins of Morakniv are always close by.

Morakniv Garberg is designed to handle the extreme

Finally! Morakniv users have longed for a full tang model and now we are proud to present the Morakniv Garberg, designed with the users high demands in focus. Meet Arvid Larsson and Markus Leijon at our development department.

There have been busy days in the development department at Morakniv lately. The last touches to the Morakniv Garberg full tang have challenged the development team in Mora, Sweden.

"We wanted to achieve our vision of the ideal full tang knife. That means we need to understand the users. What will they use it for? How will they grip it and work with it? Even store and carry it? Once we understand that we can customize the knife's characteristics accordingly", says Arvid Larsson, Design Engineer.

With the Morakniv Garberg finished, there's no question about it being a knife of the well known Morakniv standard and quality.

"Our history and heritage is reflected both in the functions and the design. A hundred years ago we didn't have the technology we have today, yet we did amazingly good knives. That's inspiring! Morakniv Garberg is a highly-functional knife with a plain and clean Swedish design", says Markus Leijon, Industrial Designer.

To live up to our own, as well as the users, high standards and ambitions, only the best materials are good enough.

Arvid continues:

"The Swedish stainless steel is treated in a secret process in our factory in Mora. Here it gets unique characteristics; such as the long lasting sharpness and strength."

As for the handle, it's made from a Polyamide with exceptional mechanical properties that provides extreme stress resistance.

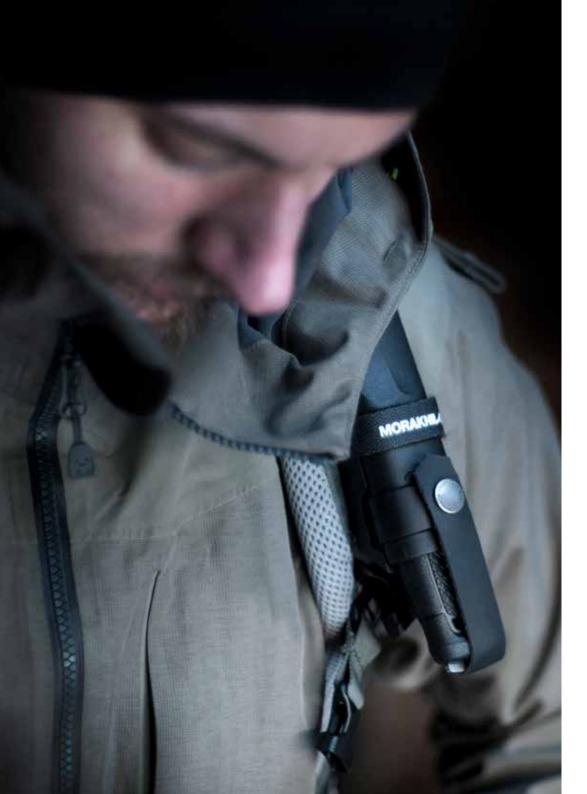

"In choosing these specific materials, we've made sure that the knife will work under extreme pressure, whatever task you intend to perform."

Now it's time to put Morakniv Garberg in the public spotlight.

"It's designed to be used day in and day out in every possible situation. Wherever you're planning on experiencing your adventure, Morakniv Garberg won't let you down," says Markus.

Arvid concludes:

"We're looking forward to seeing how our users and the market will receive the Garberg knife. We've put a lot of work, heart and soul into this project and we hope you'll feel that when you hold the knife in your hand."

Morakniv Garberg

Lat 61.114255° Lon 14.252933°

This full tang knife is designed to meet the long-time wishes from our most dedicated users, as well as the desires of the knife lovers that haven't yet discovered the world of Morakniv. The knife is developed to handle the most challenging tasks it may be exposed to.

Our full tang model is the most robust knife we've ever made and has a genuine Morakniv design. We've used the best and most rugged materials in every part of the knife, from the handle to the blade. As with all our knives, it's produced in our own factory in Mora, Sweden.

In this exclusive version, it's delivered in a new, unique and vigorous black leather sheath. Now we're talking about the greatest Morakniv ever - a full tang phenomenon! It will take your knife experiences to whole new levels.

Features

Coil shape

The coil shape in the heart of the knife is strongly related to the heritage of Morakniv. In Sweden, the knife with the red coil shaped handle is probably as well known as the famous Dalahorse.

Pattern

The rhombus pattern is a traditional pattern that is present in many variations in Mora and the region of Dalarna.

In the handle, the pattern provides a significantly improved grip. Beside its high functionality, it also pays a tribute to our region and history.

Scandi grind

The knife is grinded with a scandi grind which makes it easy to keep sharp.

Blade finish

The blade has a semi-matte finish appreciated among the outdoor community.

Steel

The blade is 3,2 mm thick and 109 mm long. It is made of high-quality Swedish stainless steel (14C28N) that is treated to the highest quality in our own factory.

Full tang

The 3,2 mm thick blade goes all the way through the handle to the rear, which provides extra strength.

Hole

The rear part of the handle has a hole for fastening a Lanyard, rope or other gadgets according to preference.

Polyamide

A specially made and extrarugged polyamide is used during the moulding process of the handle. Compared to other polymers, this one provides the handle with exceptional mechanical properties and makes it extremely stress resistant. This makes the handle close to unbreakable.

Handle shape

MORAKNIL

The symmetrical handle allows flexible use of the knife.

The drop design on the back is big enough to keep the knife steady in your hand.

Grinded spine

The spine of the blade is ground to make the edge perfect for use with a fire starter. This means that you do not need to use the edge of the blade when starting your fire, which makes your knife stay sharp for longer.

Cover

The sheath has a sturdy and generous cover, a design that has multiple functions. For example, it makes sure that the knife stays securely in place and that the cover is easy to open when wearing gloves.

In a serious survival situation you need to be sure you will not lose your knife. At the same time, you also need to be confident that you are able to reach and use it within seconds. To be sure that your knife is readily accessible and won't get lost, this cover is the perfect solution.

Shape

The powerful appearance is our way to honour the most robust knife we have ever made.

Belt loop

At the back of the sheath there is a sturdy belt loop made from the same high-quality leather as the rest of the sheath.

Leather sheath

This natural material is probably the best choice when it comes to durability in a heavy-duty knife sheath that is repeatedly put to the test. A leather sheath like this is something that will look and feel better the more you use it. It simply gets better with time and is something you can enjoy for the rest of your life.

The leather

The sheath is made from 3 mm thick premium high quality black leather.

Features

The all-round that is always close by, in the place you need it

Hook & Loop fastener

The knife is kept safe in the mount with a Hook & Loop fastener. It allows a secure mounting as well as a fast and easy attachment.

If you are looking for a more permanent fastening solution, the Hook & Loop fastener can be replaced with a cable tie.

Multi-Mount

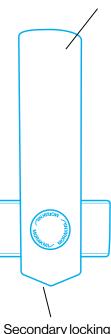

The Morakniv Multi-Mount is a versatile mounting solution that takes your knife use to the next level. It allows the knife to be mounted virtually anywhere you want.

It is compatible with the MOLLE standard mounting system. It has strategically placed screw holes and slots for different types of straps.

Attach and detach the knife from the mount in just a couple of seconds. Of course, it is also possible to just take the knife straight out of the sheath and use it.

The secondary locking strap has details made of leather. This natural material is probably the best choice when it comes to durability in details like these, that are put to repeated wear and tear.

Secondary locking

When the knife is used together with the Multi-Mount you have the option of putting a secondary locking on the sheath. This is a feature most military units require when using the MOLLE system. It is also a useful feature when you want to be completely sure that the knife stays in place, for example during a bumpy ride with the ATV.

10

"The full tang knife could become your One Tool Option"

Survival expert Dave Canterbury wants to highlight the importance of a reliable knife. When the outdoor adventure becomes a matter of survival, your knife could be your only available lifesaver.

D ave Canterbury has more than 20 years of experience of bushcraft and survival. He's the founder of the Pathfinder School where he teaches outdoor self-reliance and primitive skills, the author of the New York Times bestseller "Bushcraft 101", and has showed his skills on several tv-shows.

"The greatest advantage to the full tang knife is overall strength from construction throughout the tool. With no reduction in material width the tool can take the same amount of stress along its length from tasks like batoning to split wood without the possibility of being compromised at a reduction in material width."

Wood processing tasks in particular are where the full tang knives truly shine.

"There may come a time when the knife attached to your hip is the only tool available to you in an emergency and a full tang knife is your best choice. With this you can, if needed, safely process larger diameters and harder woods if necessary to affect immediate survival. The full tang knife could become your "One Tool Option" in an emergency and placing your trust in the only tool you may have is important."

As for the Morakniv Garberg, Dave has put it to the real test in hard outdoor environments.

"I have used it for all tasks that it may be required to perform under most conditions; from fine carving, meat processing, skinning game, splitting kindling and processing barks, as well as heavier tasks like cutting through cartilage joints on a carcass, striking a ferrocerium rod, and splitting 4" hardwood logs. In my mind, this knife has performed flawlessly in all these areas and I have no doubt I could trust my life to this blade in an emergency."

He stresses the importance of knowing, learning and practicing outdoor skills.

"Getting lost off a trail or spraining an ankle that could prevent you from returning on time, could be an emergency to many folks. Therefore, these skills should be a top priority for anyone planning to spend even a small amount of time in the natural world."

The names that tell our story

Many small cottages and barns. The cattle graze on the plot outside and every morning starts before sunrise with milking the cows or goats. This was the scenery of the Swedish 'fäbod', a place where people historically spent their summers to work and let their cattle run free in the surrounding nature. It was also an important time for preparation of homemade butter and cheese for the winter.

In older days, the land closest to the village was used for cultivation during the summer and therefore people had to move the cattle away. Every village had their own 'fäbod', many times even two or more. This way, our ancestors could walk with their cattle from one settlement to another during the summer.

In the region around Mora there have always been many 'fäbodar' and many of them still exist today. The houses are mainly used as holiday cottages, where the descendants of the original farmers can escape the urban society and experience the genuine peace of nature.

Since traditions here in Mora are strong, still today, local farmers take their cattle out into the woods for a summer at the 'fäbod'.

Garberg

One of these 'fäbodar' is called Garberg. It originally belonged to the village outside of Mora where our factory's located today and all our knives are made. Garberg lies at the shore of a large lake, created by a nearby hydroelectric dam in the great river of Dalarna. Here, people have been working hard for centuries, facing the challenges of nature and the demanding self-sufficient life.

To name our full tang knife Garberg after the place and the people who lived there is our way of paying tribute to our roots. Our ancestors and the surroundings of Mora are all parts of who we at Morakniv are today. The Garberg knife - the proud, strong and hard working tool that gladly faces every challenge - is our interpretation of the life once lived at the 'fäbod' of Garberg.
